

Backend-focused Software Engineer with **4+ years of experience owning and evolving distributed backend systems** in cloud-native environments. Proven ability to **identify system bottlenecks, redesign service boundaries, and improve reliability, latency, and deployment safety at scale**. Strong technical ownership across **backend APIs, data stores, CI/CD pipelines, and production operations**, with a bias toward long-term maintainability.

PROFESSIONAL EXPERIENCE

Full Stack Software Engineer

Hub Group Inc — Oak Brook, IL | Jan 2024 - Present

- Owned backend architecture for logistics platforms processing **thousands of daily transactions**, driving **service decomposition** and **database optimizations** that reduced end to end API latency by **15%**.
 - Identified systemic reliability issues across tightly coupled legacy services, redesigned service boundaries, **reducing recurring production incidents by 20%** across multiple consecutive release cycles and operational periods.
 - Led design of automated document processing pipeline orchestrating third party machine learning services, owning asynchronous workflows, retries, and failure handling that **reduced manual AP AR effort by 80%** overall.
 - Established backend standards for **REST APIs** and **MongoDB** schema evolution, improving backward compatibility and deployment safety while reducing breaking change defects by **30%** across multiple quarterly releases.
 - Built and standardized CI CD pipelines using GitHub Actions, Jenkins, and Terraform, **reducing deployment failures by 40%**, eliminating configuration drift, and **lowering regression related on call alerts by 30%**.
-

Software Engineer — Healthcare Backend Systems

Oracle Cerner — Bengaluru, India | Apr 2021 - Aug 2022

- Designed and maintained backend services supporting **EHR** and **clinical workflows** used by **thousands of clinicians**, ensuring high availability and data correctness within regulated patient critical healthcare production environments.
 - Designed and implemented healthcare backend components using **Java**, **Cerner CCL**, and **REST APIs**, improving clinical reporting and documentation workflows and increasing operational efficiency by **40%** across clinical teams.
 - Built and enhanced interoperability pipelines aligned with **HL7** and **FHIR** standards, reducing cross system data exchange failures by **25%** while improving integration reliability across enterprise scale healthcare environments.
 - Refactored legacy data export and migration tooling into reusable components, increasing **data throughput by 30%**, reducing migration failures by **25%**, and improving long term maintainability of critical healthcare data pipelines.
-

Programmer Analyst

Cognizant — Chennai, India | Sep 2020 - Apr 2021

- Built backend services for payment processing and transaction orchestration, supporting **millions of monthly transactions** with strict consistency, availability, and latency requirements in regulated financial transaction systems.
 - Implemented idempotent payment flows using idempotency keys, retries, and compensating recovery logic, **reducing duplicate transactions and reconciliation failures by 20%** across distributed payment processing services.
 - Worked on transaction state management using well-defined lifecycle states, balancing consistency and availability tradeoffs while ensuring **PCI-DSS compliance** and reducing transaction-related production incidents by **15%**.
 - Improved service observability through structured logging, metrics, and alerting, **reducing transaction latency by 15%** and shortening investigation time for payment failures by **25%** during production incidents.
-

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, C++

Web & Front-End Technologies: Next.js, React, Vue, Angular, HTML5, CSS3, PHP, Bootstrap

Backend & Frameworks: Node.js, Express, Spring Boot, RESTful APIs, Microservices, Flask, Django

Datastores: MongoDB, SQL, Oracle, Elasticsearch, Teradata, SQL Server, DynamoDB, NoSQL

Cloud & DevOps: AWS (S3, RDS, VPC, EC2), Azure, GCP, Docker, Kubernetes, Jenkins, GitHub Actions

Systems & Tools: CI/CD, Kafka, Nginx, Visual Studio, Observability (logging/metrics), Agile

EDUCATION

Master of Computer Science — Illinois Institute of Technology, Chicago, Illinois, USA

Bachelor of Engineering (Computer Science) — Visvesvaraya Technological University, Bengaluru, India
