
Software Engineer with 4+ years of experience building cloud-native and distributed software solutions across logistics, healthcare, and financial systems. Hands-on across the full application stack with JavaScript, TypeScript, React, Node.js, Java, SQL/NoSQL, AWS/Azure/GCP, Docker, and CI/CD. Experienced in Agile delivery, backend architecture, observability, API design, production troubleshooting, and stakeholder collaboration to assess requirements, delivery complexity, and scalable implementation approaches. Built GenAI-powered solutions using Python, FastAPI, LLM workflows, and agent orchestration.

PROFESSIONAL EXPERIENCE

Full Stack Software Engineer

Hub Group Inc - Oak Brook, IL | Jan 2024 - Present

- Develop and enhance logistics software products processing thousands of daily transactions using Node.js, JavaScript/TypeScript, MongoDB, and REST APIs, **reducing end-to-end API latency by 15%**.
 - Partner with product owners and cross-functional stakeholders across the **full SDLC** to translate business requirements into scalable backend services, data workflows, and production-ready application features.
 - Identified reliability bottlenecks in tightly coupled legacy services, redesigned service boundaries, and strengthened unit and integration testing, **reducing recurring production incidents by 20%** and improving release predictability.
 - Led design and implementation of an automated document-processing workflow integrating machine learning services, with asynchronous orchestration, retries, and failure handling, **reducing manual AP/AR effort by 80%**.
 - Established backend standards for **REST APIs and MongoDB schema** evolution, improving backward compatibility, **reducing breaking-change defects by 30%**, and supporting more reliable CI/CD releases.
-

Software Engineer - Healthcare Backend Systems

Oracle Cerner - Bengaluru, India | Apr 2021 - Aug 2022

- Designed and maintained backend services **supporting EHR and clinical workflows** used by thousands of clinicians, delivering high-availability software in regulated healthcare environments.
 - Built healthcare backend components using **Java, Cerner CCL, and REST APIs**, improving clinical reporting and documentation workflows and increasing operational efficiency by 40% across clinical teams.
 - Developed interoperability pipelines aligned with **HL7 and FHIR standards**, **reducing cross-system data exchange failures by 25%** and improving reliability across enterprise healthcare platforms.
 - Collaborated with engineering and business stakeholders to convert workflow requirements into scalable, maintainable backend solutions for healthcare applications.
-

Programmer Analyst

Cognizant - Chennai, India | Sep 2020 - Apr 2021

- Built backend services for payment processing and transaction orchestration, supporting millions of monthly transactions with strict consistency, availability, and latency requirements.
 - Implemented idempotent transaction flows using retries, idempotency keys, and recovery logic, reducing duplicate transactions and reconciliation failures by 20% across distributed services.
 - Improved service observability through structured logging, metrics, and alerting, **reducing transaction latency by 15%** and cutting investigation time for payment failures by 25%.
-

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, Python, SQL, C++

Frontend: React, Next.js, Vue, Angular, HTML5, CSS3, Bootstrap

Backend: Node.js, Express, Spring Boot, Flask, Django, REST APIs, Microservices

Databases: MongoDB, SQL, SQL Server, Oracle, DynamoDB, Teradata, Elasticsearch, NoSQL

Cloud & DevOps: AWS, Azure, GCP, Docker, Kubernetes, Jenkins, GitHub Actions, Terraform, CI/CD

Engineering: Agile, Scrum, Full SDLC, Distributed Systems, API Design, Observability, Performance Optimization, Troubleshooting, Application Reliability, Unit Testing, Integration Testing, Secure Software Development

AI / GenAI: Python, FastAPI, LLM workflows, Agent Orchestration, GenAI application integration

PROJECTS

AI Customer Support Copilot – Built an AI support copilot using Python, FastAPI, and LLM workflows for grounded responses, case summarization, and faster ticket resolution.

Agent Orchestration Platform – Built an AI developer workspace that converts product ideas into planning documents and scaffolded codebases through multi-step agent orchestration.

EDUCATION

Master of Computer Science - Illinois Institute of Technology, Chicago, Illinois, USA

Bachelor of Engineering (Computer Science) - Visvesvaraya Technological University, Bengaluru, India
